

Date: 4/1/14

## Wednesday Challenge Form

Group Members: Entire class

Problem Statement: In the least amount of time possible, build a box out of pipes, following the image labeled “box”. Two people build at a time, one blindfolded building, and the other giving commands without physically interfering.

Approach: See image “box” for required design.

Solution: We build the box in 37 minutes, 20 seconds. Which means we lost to period four. It took us three rounds per person to complete.

Lessons Learned: The dumbification of individuals is complete and without exceptions.
